

# The value of software architecture

- Reduce Risks and Costs
- Improve maintainability, **development, delivery**

DEMO

How testing impacts your architecture &  
delivery

Test should not be coupled to the  
implementation and should only change when  
requirements change

Mocks = Coupling test and implementation

If I dont mock, Is this even unit testing ?

Are mocks not advised then?

Don't take it from me

Mr. Beck and Mr. Fowler
